PRD — Peptide Calculator Website

Document: Product Requirements Document (Sir ke assignment ke liye) **Date:** 26 Oct 2026 **Base:** Competitor review (isi folder me `peptide-calculator-competitor-review.md`) — top 6 peptide calculator sites ko khol kar parhne ke baad banaya gaya. **Status:** Draft — jin cheezon par abhi faisla nahi hua, un ke aage **"confirm karna hai"** likha hai.

---

1. Product ka maksad

Hum ek **peptide calculator website** bana rahe hain jiska main tool user ko ye hisaab karke de: vial me kitna peptide hai, kitna bacteriostatic (BAC) water milaya gaya, aur matlooba dose ke liye syringe par **kitne units** draw karne hain. Ye website Sir ke full-stack assignment ka product hai (frontend + backend), aur is ka doosra maksad SEO seekhna aur Google se organic traffic lana hai — aise keywords par jahan pehle se sites rank kar rahi hain ("peptide calculator", "peptide reconstitution calculator", per-peptide calculator keywords). Competitors ke calculators taqreeban ek jaise hain; humari site un se aage is liye hogi ke hum wo extra cheezein dein ge jo visitors ko chahiye lekin top sites nahi detin (cost per dose, vial kitne din chalegi + safety warning, printable dose card, ghalti rokne wale smart warnings — tafseel Section 5 me hai).

2. Target visitor

- **Kon hai:** Aisa user jis ke pas pehli ya dusri dafa peptide vial aya hai (masalan BPC-157, TB-500, Semaglutide, Tirzepatide) aur use apne protocol/prescriber ki di hui dose ko syringe units me badalna hai. Aksariyat beginners ki hai.
- **Use kya chahiye (research se sabit):**
  - Fori jawab: "Kitne units draw karun?" — baghair signup, baghair intezaar
  - mg / mcg / mL / units ki confusion ka hal (sab se bari uljhan — review ke Gap 1 me saboot)
  - "Vial me kitni doses hain, kitne din chalegi, poora cycle kitne ka parega?"
  - Mix karne ke baad storage aur ghalti ho jane par rehnumai
- **Device:** Zyada tar visitors phone se ayenge (fridge ke samne kharay hokar vial dekh rahe hote hain) — is liye site **mobile-first** hogi. *(Ye aam tool-site pattern hai; apni traffic ka asal data Search Console/Analytics se baad me confirm hoga.)*
- **Language:** Site ka content **English** me hoga, kyunke keywords aur audience English hain. Urdu version — **confirm karna hai** (filhal plan me nahi).

3. Pages ki list

Launch ke sath (Pehle):

1. **Homepage = Main Peptide Calculator tool page** — keyword: "peptide calculator". Upar calculator, neeche how-it-works, examples table, FAQ, guides ke links, disclaimer.
2. **Per-peptide calculator pages** (har page: preset calculator + worked example + quick answers + storage note + FAQ + disclaimer):
   - BPC-157 calculator
   - TB-500 calculator
   - Semaglutide calculator
   - Tirzepatide calculator
   - Retatrutide calculator
   - CJC-1295 calculator
   - Ipamorelin calculator
   - GHK-Cu calculator
   - (Baad me mazeed: PT-141, Melanotan II, MOTS-c, Sermorelin, AOD-9604, Epithalon, Semax)
3. **Guides / Articles section** — 10 articles (list Section 6 me)
4. **Disclaimer page** (poora legal/safety text)
5. **About page** — site kya hai, calculator kaise kaam karta hai, contact ka tareeqa — **contact email confirm karna hai**

Baad me: 6. Extra tool pages: Dose Calculator, Concentration Calculator, Blend Calculator, mcg↔mg converter, mL↔units converter 7. Peptide Library / profiles (har peptide ki maloomat: kya hai, aam vial size, storage, half-life — sirf research maloomat, koi dose recommendation nahi) 8. Printable Reconstitution Chart page (har vial size × pani ke units table)

4. Main calculator requirements

Competitors ki sab se achi cheezon ko mila kar "best version" ye hai:

Inputs:

#	Input	Notes
1	Peptide select (optional)	List se choose karne par aam vial size + pani bhar jaye; **dose kabhi auto-fill NA ho** (Pepteca wali safety rule)
2	Vial size (mg)	Preset buttons bhi hon (2 / 5 / 10 / 15 / 20 / 50 mg)
3	BAC water (mL)	Preset buttons (1 / 2 / 3 / 5 mL)

#	Input	Notes
4	Desired dose	mcg ya mg — **toggle** dono ke liye, taake conversion ki ghalti na ho
5	Syringe size	0.3 mL / 0.5 mL / 1 mL aur U-100 / U-50 / U-40
6	Frequency	Din me kitni dafa ya haftay me kitni dafa (days nikalne ke liye)
7	Mix date (optional)	Discard/use-by date nikalne ke liye
8	Vial price (optional, Baad me phase)	Cost per dose ke liye

Outputs (sab ek sath, result card par):

1. **Units to draw** — sab se bara, saaf number (masalan "10 units")
2. Draw volume (mL)
3. **Visual syringe** — fill line ke sath drawing + zoomed view
4. Concentration — mg/mL, mcg/mL, aur mcg per unit (teeno)
5. **Doses per vial**
6. **Vial kitne din chalegi** (frequency se)
7. **Discard date** (mix date + 28–30 din) — agar applicable ho
8. Cost per dose / per week (jab price di gayi ho — Baad me phase)

Warnings (calculator khud de — ye humari pehchan hai):

- Draw syringe ki capacity se bara ho → laal warning + hal (bari syringe ya pani badalna)
- Dose bohat chhoti ho (<5 units) → tip: zyada pani dalne se number parhna asan ho jayega
- **mg/mcg mistake guard:** result ghair-mamooli ho (masalan hazaaron units) → calculator roke: "Lagta hai unit ghalat dala gaya hai — check kar lein"
- **Vial 30 din se zyada chale → safety flag:** "Mix ki hui peptide aam tor par 28–30 din ke andar use kar leni chahiye — chhoti vial ya aadhi miqdar mix karna behtar ho sakta hai"
- Jab tak tamam inputs na hon, ghalat/adhura result na dikhaya jaye (Pepteca wali rule)

Reverse mode: Toggle — "Mujhe dose theek X units par chahiye" dalne par calculator **pani ki miqdar** bata de.

5. Extra features (priority ke hisab se)

Pehle (launch ke sath):

1. Visual syringe + zoom view (Section 4 me shamil)

2. Smart warnings ka poora set (upar wala) — **kisi top competitor ke pas ye combo nahi**
3. Doses per vial + vial kitne din chalegi + discard date
4. **Print my card** — printable result card: peptide, vial, pani, concentration, units, mix date, discard date + chhota dose log table (date / dose / site) — bina signup
5. **Save in browser** — akhri calculation user ke browser me save rahe (localStorage), wapis ane par wahi numbers milein (Caliper wali khoobi)
6. Har page par FAQ section (Google ke "People Also Ask" sawalon ke jawab)
7. Examples/reference tables tool page par (aam vial + pani setups ke ready units)

Baad me: 8. **Cost per dose + cycle cost calculator** (vial price input; kitni vials lagein gi + total) — top 6 me kisi ke pas nahi 9. **Schedule view + injection site rotation helper** — doses kin tareekhon par ayengi, print karne wali list (abhi ye khoobi sirf apps me hai) 10. **Dead-space adjusted "practical doses"** number + note 11. Blend calculator (2 peptides ek vial me) 12. HGH / HCG (IU) calculators 13. Peptide comparison chart (side-by-side: aam vial, storage, half-life — research maloomat) 14. Email se dose reminder / saved protocols (backend wala phase) — **confirm karna hai** ke ye Sir ke assignment ki scope me hai ya nahi

6. Content plan — 10 articles

Sir ka order hai: site banne ke baad **10 articles** likhne hain. Ye titles asal demand par base hain (competitor guides + FAQs + People Also Ask type sawalat — saboot review file me hai). Har article ke andar calculator ka link hoga (internal linking).

#	Article title	Kis demand par base hai
1	How to Reconstitute Peptides: A Step-by-Step Beginner's Guide	Dono baray competitors ki main guide; har beginner ka pehla sawal
2	What Is Bacteriostatic Water? BAC Water vs Sterile Water Explained	PeptideCalcs ki guide; sterile water ki 24–48 ghante wali confusion
3	Peptide Units Explained: mg vs mcg vs mL vs Syringe Units	Sab se bari beginner confusion (review Gap 1)
4	How Long Do Reconstituted Peptides Last? The Complete Storage Guide	Storage tables wali sites ki demand; 28–30 din ka rule
5	How Many Doses Are in a Vial? And How Long Will Your Vial Last?	Literal Google sawalat (PeptideDeck, SeekPeptides, Peptulator FAQs)
6	How to Read an Insulin Syringe: U-100, U-50 and U-40 Explained	Har calculator FAQ me mojood sawal
7	7 Common Peptide Calculator Mistakes (And How to Avoid Them)	mg/mcg 1000× ghalti, dead space, ghalat syringe (Peptide Critic /

#	Article title	Kis demand par base hai
		PeptideCalc Pro topics)
8	Peptide Storage Guide: Powder vs Mixed, Fridge, Freezer and Travel	Peptide Journal / The Peptide Catalog wale topics
9	Something Went Wrong? Cloudy Solution, Powder Not Dissolving, Left Out Overnight, Shaken Vial	Troubleshooting sawalat jo FAQs me bar bar ate hain (review Gap 4)
10	How Much BAC Water Should You Add? Choosing the Right Amount for an Easy-to-Read Dose	"How much BAC water do I add to a 5 mg vial?" — bar bar poocha jane wala sawal

- Har article ki length aur exact angle — **confirm karna hai** (Sir ki guidance ke baad). Aam competitor guides 800–2,000 words ke darmiyan hain.
- Articles English me honge.

7. Design / UX notes

- **Mobile-first:** Calculator pehle screen par hi (scroll kiye baghair) nazar aye; bare tap targets; numbers bare aur saaf
- **Speed:** Page bohat halka ho — heavy images/animations nahi. Tool sites par speed hi ranking factor bhi hai aur user ki zaroorat bhi
- **Simple layout:** Upar tool → result card → how it works → examples table → FAQ → guides → disclaimer. PeptideCalcs jaisa bohat lamba promotional page nahi banana
- **Result sab se prominent:** Units wala number sab se bara; syringe visual us ke sath
- **Koi signup wall nahi:** "Free tool, no signup" — top sites yahi kehti hain aur user yahi chahta hai
- **Dark mode:** Baad me wala option — **confirm karna hai** (competitors me aam nahi dekha)
- **Accessibility:** Tables mobile par swipe ho saken (PeptideCalcs ki tarah "swipe to see" pattern), text ka contrast theek ho
- **Language:** Interface simple English — technical terms waisi hi jo community use karti hai (vial, BAC water, draw, units)

8. Tech plan

Sir ke order ke mutabiq steps:

1. **Build:** Antigravity me website build hogi — **frontend + backend dono** (vibe coding; agent code likhega, hum review karenge)
    - Frontend: calculator tool, pages, articles — responsive/mobile-first

    - Backend kis kaam ayega — **confirm karna hai**: mumkin uses hain saved calculations/accounts, email reminders, contact form. Basic calculator ka math frontend par bhi ho sakta hai, lekin Sir ki requirement full-stack hai, is liye backend lazmi hissa hoga — asal scope Sir se confirm karke yahan likha jaye ga

2. **Deploy: Hostinger** par (Sir provide karenge)
    - Domain name — **confirm karna hai**
    - Hostinger plan ki tafseel — **confirm karna hai** (Sir ke dene ke baad)

3. **Go live / Indexing:** Site live karke **Google Search Console** me property add karni hai, sitemap submit karna hai, aur har page ki indexing request/check karni hai
4. **Articles:** Deploy ke baad 10 articles (Section 6) site par publish honge aur un ki bhi Search Console se indexing hogi
5. **Analytics:** Google Analytics ya Search Console ke data se traffic check karna — tool ka intekhab **confirm karna hai**

9. Disclaimer & safety (LAZMI)

Peptides ek **health gray-area** hai: bohat se peptides human use ke liye FDA-approved nahi hain aur laws mulk ke hisab se badalte hain. Is liye disclaimer is site ka optional hissa nahi — **har jaga lazmi** hai. Competitors bhi yahi karte hain (placements review file me tafseel se hain):

Disclaimer kahan kahan hoga:

1. **Tool page par calculator ke upar** ek saaf, nazar ane wala note (Path to Peptides sab se acha example hai — disclaimer page ke top par bold)
2. **Result card ke bilkul neeche** chhoti line (AI Peps / Pepteca style)
3. **Har per-peptide page aur har article ke aakhir me**
4. **Footer me Disclaimer page ka link** (har page se)
5. **Alag Disclaimer page** poori tafseel ke sath

Disclaimer me ye points honge:

- Ye calculator sirf **math/conversion** karta hai; ye **dose recommend nahi karta** — dose user ko apne prescriber/protocol se milti hai
- Site ka content sirf **research aur educational** maqsad ke liye hai; ye **medical advice nahi** hai
- Kisi bhi substance ke istemal se pehle **licensed medical professional** se mashwara lazmi hai
- Bohat se peptides **FDA-approved nahi** hain; apne mulk ke qanoon ki zimmedari user ki apni hai
- Storage/muddat wali maloomat aam guidance hai — asal hidayat vial ke label aur pharmacy ki hogi

Safety wali product choices (jo PRD ka hissa hain):

- Peptide select karne par **dose auto-fill nahi hogi** (sirf vial/pani)
- Calculator kisi peptide ki "recommended dose" **nahi bataye ga** — examples me bhi numbers ko "example/math only" likha jayega, recommendation ke tor par nahi
- **Fake testimonials/reviews nahi** dalay jayenge
- Sources jahan mumkin ho diye jayenge (PeptideUniv model: official references + "Last reviewed" date)

10. Success criteria

- **Indexing:** Tamam pages (tool, per-peptide pages, 10 articles) Google Search Console me indexed hon
- **Ranking:** "Peptide calculator" aur per-peptide keywords (masalan "BPC-157 calculator") par pehle **top 10**, phir **top 3** ki koshish — waqt ke sath; koi guarantee nahi, lekin yahi target hai jiss par kaam measure hoga
- **Traffic:** Organic traffic ka mahina-ba-mahina barhna (Search Console clicks/impressions se measure hoga)
- **Tool usage:** Log calculator asal me use karein — calculation complete karna, print/save karna (measure karne ka tareeqa Analytics ke sath **confirm karna hai**)
- **Return visits:** Save-in-browser aur printable card ki wajah se user wapis aye
- **Assignment criteria:** Sir ke diye gaye steps mukammal hon — site build ✓, Hostinger deploy ✓, 10 articles ✓, Google par live/indexed ✓

Ye PRD competitor research par base hai. Jahan "confirm karna hai" likha hai, wo cheezein Sir ya Emy ke faislay ke baad final hongi — is document me kuch invent nahi kiya gaya.
